Laravel Application Configuration Instructions for update (1)

Blade File Configuration

File: resources/views/admin/layouts/header.blade.php

Step 1: Toggle Comment Blocks

To enable the District, Specialization, and Hospital management section, you need to uncomment and comment specific lines in the header.blade.php file.

Enable Section

Uncomment lines 129 to 133

Uncomment lines 326 to 350

Disable Previous Section

Comment out lines 124 to 128

API Endpoints for Registration

These endpoints are used during the Doctor/User registration process to dynamically fetch data such as district, hospital, and doctor specialty.

Data	Endpoint
District List	api/districts
Hospital List	api/hospitals
Doctor Specialties	api/doctor-specialty

Example Base URLs:

https://main.denterpro.com/api/districts

https://main.denterpro.com/api/hospitals

https://main.denterpro.com/api/doctor-specialty

Quiz Filtering Fields

While creating or filtering Quiz data, these fields are used to narrow down the content:

- District

- Hospital

- Doctor Specialization

These fields depend on the above API endpoints and must be populated correctly for accurate quiz filtering and assignment.

Reminder: After making changes, always clear view cache using:

php artisan view:clear
